

## Welcome to the Prehistoric Pages of Angellis

This site is devoted to mammals, reptiles and amphibians that have a fossil record. You can surf to the following points of interest.

**Galleries:** This section contains images of hundreds of creatures (dinosaurs, mammals, reptiles, amphibians) with a fossil record.

**Taxonomy:** One of the most problematic and controversial subjects in zoology and paleontology is examined. That is the field of taxonomy. A history of taxonomy with varying theories and concepts is covered. New theories and a conceptual new taxonomic process, using some old perspectives with new ones, are presented.

**Beginnings:** An interesting comparator of the Creation/Evolution theories, this section also includes a faunal timeline, that is absent in creation science circles. The timeline includes data, scientific evaluations, and creation oriented information. There are also theories, ideas and concepts that are from the authors' point of view and based on available data and information.

**What's New:** This is a listing of updates to the site.
